## Worst path

P10051_en
Dotzè Concurs de Programació de la UPC - Final (2014-10-01)
Given a directed and complete graph with $n$ vertices, and an initial vertex $x$, compute the maximum cost of all the paths without repeated vertices that begin at $x$. The given graph is represented by an $n \times n$ matrix $M$, where for every pair $(i, j)$ with $i \neq j, m_{i j}$ is the (perhaps negative) cost of the arc from $i$ to $j$.
For instance, the maximum cost of the first test is 80 , corresponding to the path $1 \rightarrow 0 \rightarrow 3$, with cost $-10+90=80$.

## Input

Input consists of several cases, each one with the number of vertices $n$, followed by the matrix $M$ ( $n$ lines, each one with $n$ integer numbers), followed by the initial vertex $x$. Vertices are numbered from 0 to $n-1$. You can assume $1 \leq n \leq 18,0 \leq x<n$, that the diagonal has only zeros, and that the rest of numbers are between $-10^{6}$ and $10^{6}$.

## Output

For every case, print the cost of the worst path without repeated vertices that begins at $x$.

| Sample input |  |  |  |
| :---: | :---: | :---: | :---: |
| 4 |  |  |  |
| 0 |  | 30 | 90 |
| -10 | 0 | 50 | -12 |
| -60 | 35 | 0 | 15 |
|  | -70 | -11 | 0 |
| 1 |  |  |  |
| 1 |  |  |  |
| 0 |  |  |  |
| 0 |  |  |  |
| 3 |  |  |  |
| 0 | 6 | 8 |  |
|  | 0 | 3 |  |
| -7 | -2 | 0 |  |
| 2 |  |  |  |

## Sample output

80
0
0
