
Iterative double factorial**P17913_en**

Write an iterative function that returns the double factorial $n!!$ for a natural n .

Recall that $n!! = n \times (n - 2) \times (n - 4) \times \dots$. For instance, $9!! = 9 \times 7 \times 5 \times 3 \times 1 = 945$ and $8!! = 8 \times 6 \times 4 \times 2 = 384$. By definition, $0!! = 1!! = 1$.

Interface

C++,C	int <i>double_factorial</i> (int <i>x</i>);
Java	public static int <i>doubleFactorial</i> (int <i>x</i>);
Python	<i>double_factorial</i> (<i>x</i>) # returns int
	<i>double_factorial</i> (<i>x</i> : int) → int

Precondition

Assume $0 \leq n \leq 19$.

Observation

You only need to submit the required procedure; your main program will be ignored.
