## Time decomposition (2)

Write a procedure
void decompose(int $n, \operatorname{int} \& h, \operatorname{int} \& m, \operatorname{int} \& s) ;$
that, given a quantity of seconds $n$, computes how many hours $h$, minutes $m$ and seconds $s$ it represents. That is, we must have $s+60 m+3600 h=n$, with $0 \leq s<60$ and $0 \leq m<60$.

## Precondition

$n$ is a natural number.

## Observation

You only need to submit the required procedure; your main program will be ignored.
