## Friend numbers

P22662_en
Segon Concurs de Programació de la UPC - Segona Semifinal (2004-09-15)
Let $x_{1}, \ldots, x_{n}$ be a non-empty sequence of natural numbers, all of them strictly larger than 1 , and let $g c d(x, y)$ stand as usual for the greatest common divisor of $x$ and $y$. We say that $x_{i}$ is a friend of $x_{j}$ if and only if at least one of these conditions hold:

- $\operatorname{gcd}\left(x_{i}, x_{j}\right)>1$;
- $x_{i}$ is a friend of some $x_{k}$, and $x_{j}$ is also a friend of $x_{k}$.

Write a program such that, given a sequence of numbers, computes the size of the largest set of friends in it.

## Input

Input consists of several cases. Every case begins with a number $n \geq 1$, followed by $n$ different integer numbers, all them between 2 and 100000 .

## Output

For every case, print the size of the largest set of friends.

## Sample input

4
$\begin{array}{lll}21 & 2 & 25\end{array}$
3
5187

## Sample output <br> 3 <br> 1

## Problem information
