
Concatenation of vectors

P24301_en

Write a function that returns the concatenation of @v1@ and @v2@. That is, you must return a vector with the elements of @v1@ followed by the elements of @v2@.

C++ **vector<int>** concatenation(**const vector<int>&** v1, **const vector<int>&** v2);

Java **public static int[]** concatenation (**int[]** v1, **int[]** v2);

Python concatenation (v1, v2); # returns list

MyPy concatenation (v1: **list [int]**, v2: **list [int]**) -> **list [int]**
