## The burger's game

P28661\_en

Vuitè Concurs de Programació de la FME (2011-12-21)

---

(The original statement in Catalan has some private jokes. This English version goes straight to the point of the problem.)

Consider the following two-player game. There is a plate with  $n$  burgers. By turns, each player eats a number of Fibonacci of burgers (at least one). The first player that cannot eat, loses. Please write a program to tell who wins, assuming perfect play.

### Input

Input consists of several cases, each with a natural number between 0 and  $10^5$ .

### Output

For every case, print the number of the winning player (1 or 2), assuming perfect play by both players.

#### Sample input

```
0
1
2
3
4
20
99999
100000
```

#### Sample output

```
2
1
1
1
2
2
1
2
```
