Write a procedure

```c
void sort3 (int& a, int& b, int& c);
```

to sort \(a\), \(b\) and \(c\) in nondecreasing order. For instance, if called with \(a = 7\), \(b = -3\) and \(c = 1\),
the values after the call must be \(a = -3\), \(b = 1\) and \(c = 7\).

**Observation**

You only need to submit the required procedure; your main program will be ignored.

**Problem information**
