Without loops! P48848_en

Write a program that reads a sequence of natural numbers, and prints each one of the integer numbers reversed.

Input

Input is a sequence of natural numbers.

Output

For each number of the input, print it reversed. Printing reversed numbers, print zeros at the beginning if the were in the end.

Observation

You cannot use any loop, neither **for** nor **while** .

Sample input	Sample output
123456	654321
66899	99866
123000	000321
0	0
21	12
4	4
