
Is it a palindrome?

P50497_en

Write a function that tells if s is a palindrome or not. Remember that a word is a palindrome if it reads the same from left to right than from right to left. In this exercise, s can be rather large; this is why it is passed by reference.

In order to compare the efficiency of your solution against the efficiency of the solution of the Judge, start checking s from its ends.

Interface

C++	bool <i>is_palindrome</i> (const string& s);
C	int <i>is_palindrome</i> (const char s [], int ssize);
Java	public static boolean <i>isPalindrome</i> (String s);
Python	<i>is_palindrome</i> (s) # returns bool <i>is_palindrome</i> (s: str) → bool

Observation

You only need to submit the required procedure; your main program will be ignored.
