
The one of the greatest common subword

P52289_en

Some problems are so classic that barely need a statement. For this one, we ask you to compute the longest subword that two given words have in common. In case of a tie, print the smallest one in alphabetical order.

Input

Input consists of several cases, each with two non-empty words w_1 and w_2 made up of at most 500 lowercase letters.

Output

For every case, print the longest common subword. In case of a tie, print the smallest one in alphabetical order.

Observation

There are very fast algorithms to solve this problem. Here, we settle for one that takes time proportional to $n_1 \cdot n_2$, where n_1 and n_2 are the lengths of w_1 and w_2 .

Sample input 1

```
pseudopseudohypoparathyroidism  
floccinaucinihilipilification  
  
supercalifragilisticexpialidocious  
sipircilifrigilisticixpiilidiciis  
  
supercalifragilisticexpialidocious  
zzz  
  
abczzzcdazzzaba  
abcxxcdaxxxaba
```

Sample output 1

```
at  
gilistic  
  
aba
```
