Hello world! P68688_en

Write a program that prints a line with the message "`Hello world!`".

Input

There is not input: the program does not read anything.

Output

Print exactly the required text in a line.

Observation

This problem is atypical, because we do not need to read any input, and we always have to print the same. It is very easy!

Sample input 1

```
Input does not matter.
```

Sample output 1

```
Hello world!
```

Sample input 2

```
Really: Input does not matter!
```

Sample output 2

```
Hello world!
```
