## Bells

P70575\_en

Segon Concurs de Programació de la UPC - Segona Semifinal (15 de setembre de 2004)

---

*El Campanar de la Torrassa* (see picture) is the bell tower of a church located in the district of La Torrassa in the city of L'Hospitalet de Llobregat. This bell tower is well known for continuously annoying its neighbors with the sound of its bells.

Day or night, the bells sound every quarter in the traditional way: Suppose it is seven in the afternoon (19:00). In this case, at 19:00 the treble bells sound 4 times and the bass bells sound 7 times. Then, at 19:15 the treble bells sound once. Latter, at 19:30 the treble bells sound twice. Finally, at 19:45 the treble bells sound three times. Additionally, each day at noon the bass bells sound 100 times rather than 12 to signal the *Angelus*. The bells always finish playing within the first minute (that is, at 19:01, 19:16, 19:31, 19:46, etc.).

(This is a simplification, because on Saturdays, Sunday and important dates extra bells are played to signal special masses, not to count the 15th of august, when they play all day long.)

A non governmental organization that fights acoustic pollution wants to count the number of times that the bells of the bell tower sound in a large amount of time. Specifically, they need a program, that given a starting time and a length, computes the number of times the bells sound in this period of time.

### Input

Input is made of several test cases, each one on a line. Each test case consists of three integers:  $h$  and  $m$  encode the starting time ( $h:m$ ) and satisfy  $0 \leq h \leq 23$  and  $0 \leq m \leq 59$ ;  $\ell$  encodes the length, in minutes, of the time we want to measure and satisfies  $0 \leq \ell \leq 2^{28}$ .

### Output

For each test case, output must include a line with an integer denoting the number of times that the bells sound starting at  $h:m$  for a length of  $\ell$  minutes.

#### Sample input

```
19 0 0
19 0 1
10 0 15
10 0 16
0 0 5
12 0 10
23 57 1450
```

#### Sample output

```
0
11
14
15
16
104
500
```
