## I-th (4)

P74859\_en

---

Write a program that, given several test cases, each one composed by an integer number  $i$  and a sequence of natural numbers  $x_1, x_2, \dots, x_n$ , prints each  $x_i$ .

### Input

Input has several cases. Each case begins with an integer number  $i$ , followed by a sequence  $x_1, \dots, x_n$  ended with  $-1$ .

### Output

For each case, if the position  $i$  is correct, print the content of  $i$  as it is shown in the examples. Otherwise, print "Incorrect position."

### Sample input

```
5
1 3 5 7 9 0 2 4 6 8 -1
7
16 8 4 2 -1
```

### Sample output

```
At the position 5 there is a(n) 9.
Incorrect position.
```
