## Equal Subset Products

Vintè Concurs de Programació de la UPC - Final (2022-09-21)
You are given $n$ different fractions $a_{1} / b_{1}, \ldots, a_{n} / b_{n}$, with $1 \leq a_{i}, b_{i} \leq n$. Find two subsets $I, J \subseteq\{1, \ldots, n\}$, distinct and with no common elements, such that

$$
\prod_{i \in I} \frac{a_{i}}{b_{i}}=\prod_{j \in J} \frac{a_{j}}{b_{j}}
$$

For instance, if the given fractions are $2 / 1,5 / 3,1 / 2,1 / 4,2 / 4$ and $3 / 6$, a possible solution is $3 / 6 \cdot 1 / 2=1 / 4$.

## Input

Input consists of several cases, each with an $n$ between 1 and $10^{5}$, followed by the $n$ fractions.

## Output

For each case, if there is some solution, print any one in two lines, one for each side of the equality, with the number of terms followed by those terms in any order. Follow strictly the format of the sample output. If there is no solution, print just one line with the word no.

## Sample input

```
6 2/1 5/3 1/2 1/4 2/4 3/6
3 1/2 3/2 3/1
1 1/1
4 1/4 2/3 4/1 4/2
```

```
Sample output
2 1/2 2/1
1 3/2
2 3/1 1/2
1/1
0
2 4/1 1/4
```
