
Haskell — Hola maco/a!

P87974_en

Write a program that reads a person's name and greets them humorously.

Input

The input is a person's name.

Output

If the name is masculine, you should write 'Hola maco!'. If the name is feminine, you should write 'Hola maca!'. Assume that all names that end with A are feminine.

Observation

To solve this problem in Haskell, write a function *main* and choose the compiler GHC.

Sample input 1

Albert

Sample output 1

Hola maco!

Sample input 2

Sonia

Sample output 2

Hola maca!
