
Which is missing?

P89851_en

Write a program that reads sequences with all the numbers between 1 and n but one, and tells which one is missing.

Input

Input consists of several sequences. Every sequence begins with a number n between 1 and 10^4 followed by $n - 1$ natural numbers. Every number between 1 and n appears exactly once, except one of them, which is missing.

Output

For every sequence, print the missing number.

Sample input

```
5 3 2 1 5
2 1
10 5 4 6 7 1 2 9 10 8
```

Sample output

```
4
2
3
```
