Write a program to tell if a sequence of integer numbers is uniform, strictly increasing, strictly decreasing, increasing, decreasing or none of those.

Input
Input consists of a sequence of integer numbers.

Output
If all the numbers are equal, print “uniform”. Otherwise, if the sequence is strictly increasing or strictly decreasing, tell so. If none of the previous conditions are fulfilled, print “increasing”, “decreasing”, or “nothing” as required.

Sample input 1
2 3 5 7
Sample output 1
strictly increasing

Sample input 2
10 0 -5
Sample output 2
strictly decreasing

Sample input 3
4
Sample output 3
uniform

Sample input 4
1 2 4 4
Sample output 4
increasing
