## Perfect primes

P90664_en
Primer Concurs de Programació de la FME (2004-04-29)
Given a natural number $n$, let $s(n)$ be the sum of the digits (in base 10) of $n$. We say that $n$ is a perfect prime if the infinite sequence formed by $n, s(n), s(s(n)), \ldots$ only contains prime numbers. For instance, 977 is a perfect prime, because 977 , as well as $9+7+7=23,2+3=$ $5,5,5, \ldots$ are prime numbers.

## Input

Each line of the input contains a number $1 \leq n \leq 4000000$. A line with $n=0$ marks the end of the input.

## Output

For each $n$, print in a line "yes" or "no", depending on whether $n$ is a perfect prime or it is not.

## Sample input

977
1
7
17
0

## Sample output

yes
no
yes
no
