Olimpiada Informática Española — Final 2007 (2007)

Write a program that, given a quantity of money expressed in euro cents, prints the minimal number of coins that you need to reach that quantity. You have an unlimited number of coins of each kind: 1 cents, 2 cents, 5 cents, 10 cents, 20 cents, 50 cents, 100 cents and 200 cents.

Input

The input is a sequence of naturals between 0 and 10^9, ended in -1. The sequence will not contain more than 10000 numbers.

Output

For each quantity of the input, that quantity has to be printed, followed by a colon, a space, and the minimal number of coins that you need to reach that quantity.

Sample input	Sample output
0	0: 0
1	1: 1
4	4: 2
6	6: 2
8	8: 3
89	89: 6
140	140: 3
666	666: 7
1000	1000: 5
999	999: 11
-1
