## Without consecutive consonants

P98563\_en

Examen final d'Algorismia, FME (2012-01-11)

---

Given  $n$  lowercase letters, print all the ways to arrange them so that no two consonants are consecutive.

### Input

Input consists of the number of letters  $n$ , followed by  $n$  lowercase letters, all different.

### Output

Print, in alphabetical order, all the words without two consecutive consonants that can be made up using all the letters exactly once. There will always be at least one possible word.

#### Sample input 1

```
3
aie
```

#### Sample output 1

```
aei
aie
eai
eia
iae
iea
```

#### Sample input 2

```
1
z
```

#### Sample output 2

```
z
```

#### Sample input 3

```
3
yxu
```

#### Sample output 3

```
xuy
yux
```
