
Increasing diagonals

X17276_en

Examen revaluació PRO1, FIB (2015-02-06)

Given a rectangular matrix $n \times m$, and an initial position in the matrix, determine whether the four diagonals starting at the initial position have elements in strictly increasing order or not.

Input

The input is formed by several cases. Each case starts with the number of rows n and the number of columns m , followed by n lines with m integers each. The case ends with the row and column of the initial position (starting at 0).

Output

For each case, write "yes" or "no" accordingly.

Your program should follow a right programming style. Please, include the appropriate comments.
