

## 1

## Savings for the Fallas

1 point

### Introduction

Ana wants to know how much money she will spend to travel from Barcelona to Valencia to enjoy the “Fallas”. She only has a few days to continue saving money to go. Ana will send you a list with the prices of the train tickets. The first line will be the one-way ticket and the second will be the return ticket. Please, can you tell her how many euros she should save?

Come on, help Ana!

### Input

The input consists of two integers in two lines:

<One-way ticket cost>

<Return ticket cost>

### Output

Print out the total of euros that should save following this output format:

Ana should save a total of <total euros> euros.
