
Lower & upper

X23315_en

Write a function *lowupp(info)* that expects to receive a string; if it starts with the character '^', then it returns the rest of the string in upper case; if it starts with the character '_', then it returns the rest of the string in lower case; if it starts anyhow else, it returns the string unchanged.

Sample session

```
>>> lowupp('_Hi There!')
'hi there!'
>>> lowupp('^Hi There!')
'HI THERE!'
>>> lowupp('Hi There!')
'Hi There!'
```
