
Even-ascending Sequences

X24460_en

Write a function `even_ascending` that receives a list of integers and returns `True` if elements in even positions form a strictly ascending sequence, and `False` otherwise. Remember that lists positions are numbered starting at zero, which is even.

Observation

Submit just the function with no main program. If you have a test main, comment it out, or put it inside a conditional `if __name__ == "__main__"`
