Position of Difference   X28758_en

Design a function *pos_dif*(r, s) that, given two strings r and s, returns the first position at which r and s are different. If r and s are equal, the function must return -1.

Sample session

```
>>> pos_dif('pero', 'peros')
4
>>> pos_dif('alaska', 'alaska')
-1
>>> pos_dif('caramba', 'calabaza')
2
>>> pos_dif('alas', 'ala')
3
```
