## Personal Information                                    X32497_en

Write a function @check_personal(n, a, e)@ that receives information about a person: (a string *n* containing the person name, an integer *a* containing her age, and a boolean *e* stating whether she is enroled in ProAl1), and returns a boolean that contains whether the person is at least 20 years old and either her name starts with 'M' or she is enroled in ProAl1 (or both things).

### Sample session

```
>>> check_personal("Maria", 22, True)
True
>>> check_personal("Joan", 19, False)
False
>>> check_personal("Miquel", 20, False)
True
>>> check_personal("Josep", 21, True)
True
>>> check_personal("Jaume", 18, True)
False
>>> check_personal("Julieta", 23, False)
False
```
