Concatenate Some Lists   X36574_en

Write a function *cat_some(d, ks)* that receives a dictionary *d* and a list of possible keys *ks*. The keys of *d* are integers. The values are lists of integers. The returned result must be the concatenation of the lists corresponding in *d* to the keys in *ks*, in the same order the corresponding keys appear in *ks*. Integers in *ks* that do not appear in *d* contribute an empty list to the result.

Observation

Please make sure to remove or comment out from the Jutge submission any doctesting code you might have in your source code.
