
Lowercase letter counter

X59386_en

Write a function *low_let_counter(s)* that returns the number of lowercase letters in string *s*. You can use the string method *islower()* to check whether given a string it has at least one letter and all its letters are lowercase letters. For instance, *my_string.islower()* is `True` when *my_string* is 'good morning' or '2 x 5' or 'z' and is `False` when *my_string* is 'Good morning' or 'Z' or '123456'.

Sample session

```
>>> low_let_counter('The End')
4
>>> low_let_counter('Compute: 3 + 5')
6
>>> low_let_counter('66sixty_six66')
8
```
