## Count a Few Words

X61892\_en

---

Given a tuple of strings, how many of them have exactly three times the letter 'o'? Write a function *count3o(t)* that receives a *tuple* *t*, made up of arbitrary strings, and returns the quantity of strings in the tuple that have exactly three occurrences of the lowercase vowel 'o'.

### Observation

Solutions employing the method `str.count()` may be accepted but *will not receive* the maximum grade.
