## Hello and Bye!

X64734\_en

---

Write a program that prints a line with the message “Hello and Bye!”.

### Input

There is not input: the program does not read anything.

### Output

Print exactly the required text in a line.

### Observation

This problem is atypical, because we do not need to read any input, and we always print the same. It is very easy!

#### Sample input 1

Input does not matter.

#### Sample output 1

Hello and Bye!

#### Sample input 2

Really: Input does not matter!

#### Sample output 2

Hello and Bye!
