**Line counter****X68325\_en**

---

Write a code to count the number of lines in a text that contain a given word.

**Input**

Input is formed by a word  $w$  in the first line, followed by a text in subsequent input lines; these lines are formed by space-separated words.

**Output**

The number of lines in the text that have  $w$  as one of their words.

**Sample input 1**

```
table
chair carpet glass
table window
window lamp carpet bottle
armchair table table
```

**Sample output 1**

```
2
```

**Problem information**
