
Hello world!

X71233_en

Test! Write a program that prints a line with the message “Hello world!”.

Input

There is not input: the program does not read anything.

Output

Print exactly the required text in a line.

Observation

This problem is atypical, because we do not need to read any input, and we always print the same. It is very easy!

Sample input 1

Input does not matter.

Sample output 1

Hello world!

Sample input 2

Really: Input does not matter!

Sample output 2

Hello world!
