List of Longest Words   X83092_en

Write a function *longest*(*h*) that, given a list of words h, returns the list of those words in *h* that attain the longest length, sorted in alphabetical order. The words are arbitrary strings. The output may include repeated words if they appear repeated in *h* and fulfill the length condition.

Observation

Only the function will be evaluated. If your submission includes a main program (e.g. with testmod), it must be either commented out or inside a condition `if __name__ == '__main__'`
